

ND.2 Mazda MX-5 Cup - AiM Configurations

**Mazda MX-5 Cup cars include the AiM MXSv2
(-2023 AiM MXL2)**

Data Configuration files for the AiM system can be selected and downloaded from list below.

The file you need is dependent on the particular AiM Dash and sensors you have added to your car. We highly recommend “Receiving” your current configuration from your dash for your records and to verify which sensors are selected in the channels.

Once the new configuration has been imported into RaceStudio3, we suggest “Cloning” it and making any new changes to the cloned configuration.

NOTE: Always update the RaceStudio3 software prior to updating configuration files. This will ensure the latest ECU drivers are being used. Always update the AiM Dash Firmware through Racestudio3 software prior to loading configurations to ensure full functionality.

The latest Racestudio3 software and can be downloaded at:

AiM MXSv2 Configurations:

Configuration files for use with ND2 Bosch MS6 ECU Release 0111:

Flis MXSv2 - 2023-12-17 - Base Configuration - SADEV
